The Problem

Managing money is hard, especially for students and young earners.

Untracked spending

Small daily expenses add up and go unnoticed until the month ends.

No clear budget

Most people have no simple plan for how much to spend or save.

Poor decisions

Hard to know the best product or option within a limited budget.

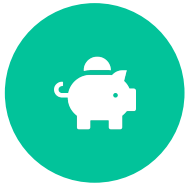

Edit with WPS Office

Our Solution: Key Features

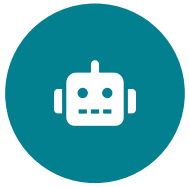

Expense Tracking

Log and categorize daily spending in seconds.

Budget Planning

Set monthly limits and savings goals easily.

AI Insights

Analyses habits and flags overspending early.

Smart Recommendations

Suggests the best options within your budget.

Edit with WPS Office

How It Works

Step 1

User Input

Income, expenses and goals are entered

Step 2

Data Processing

Data is cleaned and categorized

Step 3

AI Analysis

Spending patterns are analysed

Step 4

Suggestions

Budget tips and recommendations shown

Edit with WPS Office

Technology and Benefits

Technology Stack

- Frontend: Mobile / Web app
- Backend: Python or Node.js
- AI / ML: recommendation model
- Database: expense and user data

Benefits

- Saves time and effort
- Builds better money habits
- Personalized suggestions
- Simple and easy to use
